PLMA Trade Show 2026 Press Release – HTT Packaging and Design

Oct 25, 2026 · @HTT

FOR IMMEDIATE RELEASE

HTT Packaging and Design Expands with Additional 12,000 Sq. Ft. Facility, Adds Nitrogen Flush and new lines for additional product offerings for Liquid and Powder Single-Serve Stick Pack and Sachet Solutions.

Turnkey co-man debuts expanded capacity and new filling technology at PLMA's 2026 Private Label Trade Show, North Hall Booth #5115

Huntington Beach, CA — October 25, 2026 — HTT Packaging and Design, a full-service contract manufacturer provider, today announced an additional expanded 12,000-square-foot facility. The new facility brings HTT's footprint up to 25,000 square feet and it will house new equipment including a horizontal duplex sachet line for bottle shaped sachets, a new 50mm wide stick pack line, a 400-gallon jacketed, vacuum, mixing tank, and expanded hot-fill and flash chill capabilities. This rounds out HTT's stick pack offerings with 23mm, 25mm, 35mm, and 50mm wide stick packs in multi-line capacity.

The additional production space increases HTT Packaging and Design's manufacturing and filling capacity, supporting higher-volume private label programs without extending lead times. Alongside the expansion, the company has added nitrogen flush, blending and filling — displacing oxygen in the package headspace to protect oxidation-sensitive formulas and extend shelf life without added preservatives

These additions build on the company's turnkey model, which takes a brand's existing formula through process adaptation, manufacturing, filling, and packaging under one roof — Services include formulations, sourcing, blending, filling, and packaging.

The facility fills ingestible liquids and gels across a viscosity range from water to a honey-like and nut butter consistency, with a stick-pack fill weights from 5-60 grams depending on format and viscosity.

Powder stick packs run at a minimum order quantity of 30,000 sticks, while liquid pilot and hot-fill run start at 120 gallons of ready-to-fill product, letting brands prototype before committing to a full production run. Typical lead time from development to production is around two months.

HTT Packaging and Design is SQF certified and USDA Organic Certified, and is currently pursuing NSF certification for sports nutrition products. Every production batch undergoes in-house testing plus third-party lab verification for certificate of analysis.

Private label brands and retailers attending PLMA 2026 are invited to visit HTT Packaging and Design at North Hall Booth # 5115 to discuss formulation adaptation, contract manufacturing, and private label opportunities across liquid and powder stick packs and sachets.

About HTT Packaging and Design

HTT Packaging and Design is a full-service contract manufacturer specializing in liquid and powder stick packs, sachets, and flexible pouches for the food, beverage, and dietary supplement industries. The company offers fill-only and full manufacture-and-fill services, custom pouch formats and printing, and secondary packaging including cartons and pouches, backed by SQF and Organic certifications.
