TAEBUR

TEA CO-PACKING SERVICES | FOR IMMEDIATE RELEASE

Taebur Introduces Flexible, Low-Minimum Tea Co-Packing at PLMA

Low minimums, automated production and expert tea support help brands get to market faster.

GOLDEN, Colo., November 11, 2026 - Taebur Tea Co-Packing Services is introducing a flexible manufacturing partner for retailers, established tea brands and emerging businesses at PLMA. Combining efficient automated production, accessible minimums and a commitment to best-in-class customer service, Taebur helps customers bring private-label tea products to market and scale with demand.

Backed by decades of combined experience, Taebur's team brings together expert tea sommeliers for blend development and supply chain specialists for ingredient sourcing and production coordination. Customers can choose an existing tea blend, develop a custom formula or provide their own approved ingredients.

Your tea or ours. Taebur offers tolling, turnkey and hybrid sourcing models. With tolling, customers supply their tea or botanicals for conversion into finished tea bags. With turnkey production, Taebur procures the ingredients. Hybrid programs combine the two by ingredient or SKU, giving brands flexibility over sourcing, purchasing and production.

Capabilities include pyramid and square sachets, individually wrapped tea bags with custom-printed overwraps, iced tea pillow bags, and custom pack-outs such as mini tea tubes and tea tins. Starter programs begin at 2,000 unbranded sachets for $500 with one standard blend. Custom-printed overwrap programs start at 5,000 finished bags per SKU, making branded launches and market testing more accessible.

Taebur also has capacity to scale with your brand, with production capacity exceeding 250,000 tea bags per day across multiple proprietary tea machines.

Taebur uses proprietary automated equipment and patented machinery to streamline production, improve consistency and help keep manufacturing costs competitive. Efficient tea bag production and coordinated pack-out help brands move quickly from approved specifications to finished products, with scheduling based on material readiness and production availability.

Production takes place in an SQF-certified facility with USDA Organic-certified handling capabilities. Eligible organic products can be supported through product-specific approval. Responsive communication, clear production requirements and transparent, itemized quotes keep customers informed throughout the process.

PLMA attendees are invited to meet Taebur Tea Co-Packing Services to explore formats, sourcing options and production programs for their next tea launch. Learn more at **www.teacopack.com** or contact **sales@teacopack.com**.
